WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

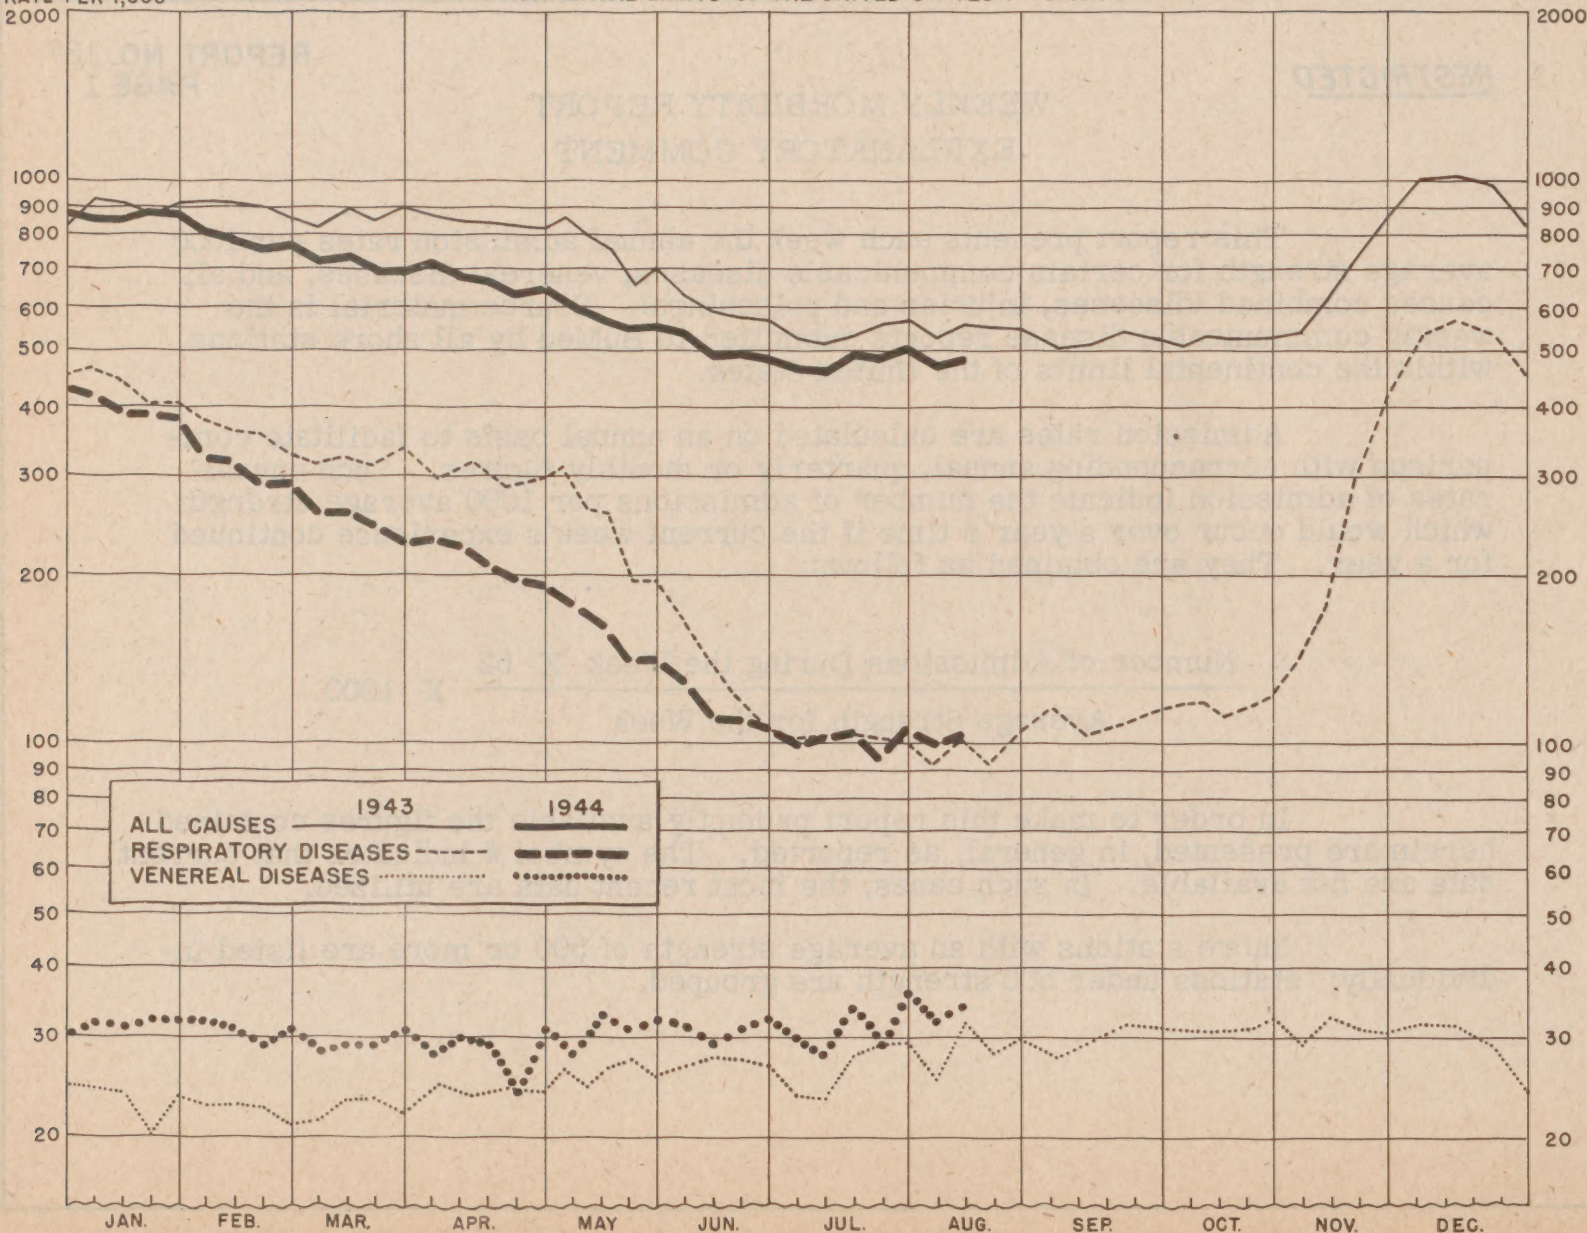

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

RESTRICTED

FIGURE 1
ANNUAL ADMISSION RATES PER 1,000 AVERAGE STRENGTH, BY WEEKS
FOR CERTAIN RESPIRATORY DISEASES*, VENEREAL DISEASES,
CONTINENTAL LIMITS OF THE UNITED STATES: 1943-1944

REPORT NO. 137
PAGE 2

RATE PER 1,000
2000

*INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

Week Ending 12 Aug 1944

The admission rate for All Causes rose this week, but the curve continues to stand well below the 1943 curve. The highest rate (825) was reported for the Potomac and Severn River Commands, the lowest (359) was reported for the 12th District.

The respiratory disease curve rose slightly. It has continued to stand slightly above the 1943 curve for the past three weeks. The highest rate (177) was reported for the 13th District, the lowest (68) for the 12th District.

The venereal disease curve after a fall in the preceding week rose again this week to 34. The 1944 curve continues to stand above the 1943 curve for the corresponding period.

Influenza and Catarrhal Fever. The rate for these infections rose slightly this week, but the curve has flattened off and stood at a level between 60 and 70 since the last week of June. The highest rate (93) was reported for the 13th District, the lowest (45) for the 12th District.

Pneumonia--Broncho and Lobar. For the seventh consecutive week the curve for these infections has been reported at 1. This rate compares favorably with a rate of 3 for the corresponding week of 1942, a rate of 2.7 for the corresponding week of 1943. The highest rate (3) was reported for the 9th and 13th Districts. The 4th and 7th Districts and the Potomac and Severn River Commands reported no cases.

Pneumonia, Atypical. For the thirteenth consecutive week the rate for this disease was reported at 2. The rate for the corresponding week of 1943 was also 2. The 11th District reported the highest rate (5). The 1st, 3rd, and 4th Districts reported no cases.

Tonsillitis and Pharyngitis, Acute. The rate for these infections was reported again at 33. The highest rate (102) was reported for the Potomac and Severn River Commands, the lowest rate (14) for the 7th District.

RESTRICTED

WEEKLY MORBIDITY REPORT

REPORT NO. 137

PAGE 4

CURRENT TRENDS--CONTD.

Rheumatic Fever, Acute. The rheumatic fever curve continued for the fourth consecutive week at a level of 1. Though the curve stands slightly above the 1943 curve at this week, the 1944 curve has otherwise stood below the 1943 curve since the third week of June. The 13th District reported the highest rate (6). The 1st, 3rd, 4th, and 7th Districts reported no cases.

Scarlet Fever. The scarlet fever rate has continued at 2 for the past four weeks. It would appear that this is about as low a level as will be attained by scarlet fever in 1944. The scarlet fever curve turned upward this week in the 5th, 11th, 12th, and 13th Districts. The highest rate (39) was reported for the 13th District. No other District reported a rate over 1.

Cerebrospinal Fever, Meningococcic. The rate for this infection was reported again at 0.09. This compares favorably with a rate of 0.5 for 1942 and 0.6 for 1943. The trend has been generally downward since the third week of February. Only the 1st, 7th, and 11th Districts reported cases this week.

Malaria. For another week the rate for malaria was reported at 2. The malaria curve has fluctuated between 2 and 3 since the second week of March and has stood below the 1943 curve for the corresponding weeks since the fourth week of May. The highest rate (7) was reported for the 1st District. The 4th District and Potomac and Severn River Commands reported no cases.

Measles. After standing for six weeks at 2 the measles curve dropped last week and this week to a level of 1, a point well below both the 1942 and the 1943 curves for the corresponding period. The highest rate (4) was reported for the 11th District. The 1st, 4th, and 6th Districts reported no cases.

Poliomyelitis, Acute Anterior. Two cases of anterior poliomyelitis were reported for the week from the 9th District. The cumulative total of poliomyelitis cases occurring in Naval shore stations of the continental U. S. since Jan. 1, 1944 is 20.
